SCOPE OF WORK

ABOUT WBSWAN

West Bengal State Wide Area Network (WBSWAN) is the triple play backbone network for data, voice and video communication throughout the state of West Bengal. Over this network Intranet, Internet and various e-Governance, e-office related activity of the Government of West Bengal are being carried out.

WBSWAN network provides Data, Voice & Video Communication facilities from State Head Quarters at Kolkata up to all District (DHQ), Sub Division (SDHQ) and Block Headquarters (BHQ) over dedicated circuits leased from BSNL. The District Head Quarters are connected to the State Head Quarters in Writers' Building as well as Webel Bhavan, Salt Lake over dual fiber optic links (in fail-over mode), ensuring a smooth operation in case of failure of one SHQ due to some major problem / natural disaster, etc.

Project Objective

We have already implemented WBSWAN link for e-office application access in 65 Government departments/offices in Kolkata. However integration of WBSWAN link along with existing internet connectivity (from different ISP) at 15 departments in an around Kolkata is our main project objective in this tender.

Proposed Solution

As per our technical observation, we found that the internet connectivity and WBSWAN link (for e-office only) were not switching traffic on respective links automatically. Hence manual intervention is required to configure at above mentioned two services. In these circumstances, we would propose a firewall / UTM devices which can integrate or automate the above process without any interference at user level. Besides, another few security services can also be implemented for the department, e.g Firewall, Web Content Filtering, Anti malware protection, Load Balancing of more than one ISP connectivity etc. Moreover we observed that there is more than one separate internet connectivity available at some of these offices for individual / group use. We propose to implement single or more internet connectivity along with e-office application (for WBSWAN link only) of higher bandwidth like BSNL GPON or any other ISP by the department.

Solution

1. Integration of existing Internet or any other better Internet along with the WBSWAN link for e-Office access.
2. Securing Internet services through UTM (Unified Threat Management) device which will deliver real-time network security protection against sophisticated application layer and content-based attacks. These attacks can include viruses, spyware, worms, Trojans, software vulnerabilities and other malicious code. This heightened level of gateway protection addresses, multiple threat access points and thoroughly scans all network layers.
3. The facility will include the ability to link the office LAN to as many as 5 or more Internet Service Providers (ISPs) using configurable WAN connections on the device.
4. Load balancing options will be there which will include basic failover, round robin and spillover. The spillover method enables administrators to set a bandwidth threshold on a WAN interface and

when that threshold is exceeded, new traffic flows are allocated to alternate WAN interfaces in a round robin manner.

5. Proper application automation can be implemented at security gateway device.
6. Whenever end users will access e-office production / demo server, the traffic will pass through the WBSWAN link.
7. Whenever end users will access any public sites / Internet, the traffic will pass through the primary/dedicated ISP links.
8. If department would like to implement another failover link for Internet / e-office, then the same can also be implemented now or as per their convenience.
9. Automatic load-balancing of either of the traffic can be done at this security device .
10. Moreover, the device can alleviate the security threats or many types of vulnerable attacks from Internet.
