## **SECTION – A**

### **BACKGROUND & OBJECTIVE OF THE PROJECT**

The selected areas of Bidhannagar are one of the most important places in terms of Traffic / Security.

These areas become the busiest and one of the populated areas in Bidhannagar. The purpose of this project Traffic Monitoring and Surveillance, Assist Police to Respond Faster in Case of any incidence Detection, Assist Police in Detecting Crime & Act as an Aid to Investigation, Act as a Deterrent to Crime & Traffic Violation, Prevent Crime, deployed fastest response team and Senior authority can observe and manage any Law and Order situation from a Control and Command Room.

Today, cities face a wide range of threats, ranging from terrorism and civil unrest to kidnapping and murder. To reduce the impact of these threats, it is critical for the authorities to capture real-time information on what is happening in and around the city. Therefore, there is a growing requirement for utilizing the new and emerging technologies to make our cities safer.

Given this background, one of the most user-friendly technologies that can play a crucial role is the extensive use of closed-circuit television (CCTV) cameras, which play a vital part in ensuring day-to-day surveillance, crime prevention and monitoring of illegal or suspicious activities. In addition to close supervision, CCTV cameras allow post-incident analysis and collection of indisputable legal evidence. While the government and legal authorities are also encouraging both public entities/groups and individuals to adopt such progressive technologies, mapping each and every nook and corner of a city without seeking the help of its people is impossible. This formed the basis of a unique community policing initiative called 'collaborative monitoring'.

As the very phrase suggests, collaborative monitoring is a unique tool, wherein the security and law enforcement agency takes advantage of the extensive network of surveillance cameras deployed by communities across the city as well as the cameras of other private and government establishments on a need basis. It is an extremely prudent enabler for the police department, as while they strengthen their bond with the communities, they can use any information or footage gathered from these security cameras to support investigation and the prosecution of criminals. The advantage provided by leveraging the extensive network of external cameras ensures enhanced crime monitoring through a cost-effective, widespread and scalable model.

It gives us immense pleasure to present this report, which highlights the importance of collaborative monitoring and lays emphasis on the impact and criticality of community participation in supporting our law enforcement agencies and optimizing crime prevention. Through this report, we have tried to present the collaborative monitoring framework and approach in the current surveillance scenario.

## **CCTV Footage can help in Crime investigation and Prevention**

There are various ways in which surveillance cameras can help in detecting the commission of a crime and in the investigation conducted by the police in the event that a crime is committed:

- The footage can be used to identify the suspects, witnesses, as well as the vehicles involved in the crime.
- The police can examine the behaviour of the suspects before, during, and after an incident or the commission of a crime
- The investigators can use the footage to look for clues that point to forensic opportunities.
- Detectives can use the footage to establish the timeline of an incident or a crime.
- The footage can be utilized to determine the entry and exit points from the scene of the crime
- The police can use the footage to verify the accuracy of the statements of both the suspects and the witnesses of a crime.
- CCTV is efficient, as police officers can often monitor the activities of individuals or areas from a central headquarters rather than conducting foot or car patrols.
- In abduction cases, the video footage would be a vital source of information to track down a person quickly and possibly save the life of the abducted individual.

### **Some benefits of using CCTV video during a crime investigation:**

- The use of the footage as evidence of an offense or crime could result in a guilty plea of the suspects, reducing costs by avoiding court trials.
- The videos can be used to prove or disprove allegations against a person.
- The footage could be used in the investigations of a missing individual or person.
- The videos can be used as a source of material backup for witness testimony.
